Counterfeit Detector Pen

The Counterfeit Detector Pen is a chemical test for authentic US currency paper. Common counterfeit bills are often printed on copy or typing paper which will react with the fluid in the Detector Pen. Real bills are printed on genuine currency paper, a unique combination of cotton and linen which does not react with the pen. The pen is a great baseline for detection, but can be fooled by bleached bills.

Level 2

Page 3-4

UV Detection Products

UV detection products increase your level of protection against counterfeit, and also enable you to authenticate documents and IDs. Genuine United States bills \$5 and up have a hidden security strip that can be exposed by a UV light. The UV strip test works well on bleached bills. UV detection products also can reveal hidden security features in government issued IDs such as licenses or passports.

Level 3

Page 5-6

Multi-Function Detection Devices

Give yourself the ultimate level of protection with these detection devices. Test currency paper, ink, security strips and watermarks to be certain that you're accepting genuine bills. Detection devices are extremely effective, discrete and can be used for multiple years. U.S. currency and government issued IDs can also be tested with these devices.

Dri Mark Products

Counterfeit Detector Pen

Dri Mark is the original patent holder and only domestic manufacturer of counterfeit detector pens.

Dri Mark's classic forgery detection pen tests for counterfeit bills by quickly authenticating genuine banknote paper.

This bill checker has been the standard in counterfeit detection for over 25 years.

PASS

Light or yellow mark

FAIL

Dark mark

Simple to use. Make a small mark on US currency. A clear/amber mark indicates genuine US currency paper. A dark mark means the bill is probably counterfeit. Since currency paper stock is not available to the public, Dri Mark's special ink authenticates the paper's stock by color.

Dri Mark Products

UV Detection Products

Dri Mark UV detection products take detection to a whole new level. Use the state of the art UV light to reveal hidden UV security features on government issued IDs and genuine US currency.

The UV Pro is the perfect tool for on-the-go detection. Ideal for bartenders or anyone in the security industry.

The Dual Detector combines the classic detector pen on one end with a handy UV light on the other. Be confident when checking bills that you will not be fooled by chemically washed bank notes.

The UV Pro

Reveal Hidden UV Features

The UV light reveals the UV security stripe on genuine bills which cannot be duplicated by counterfeiters. These UV features are also visible on genuine currencies from around the world, making the Dual Detector effective in many regions of the world.

Dri Mark Products

Detection Devices

Our Flash Test and Tri Test detectors take counterfeit detection to a whole new level.

Dri Mark's patented Tri Test is the first ultra portable, fully functioning counter-top counterfeit detection device based on the newest LED technology. Three simple tests to authenticate US money take just seconds, and provide the highest degree of protection against counterfeit including bleached bills. UV light reveals the security thread, back-light reveals watermark portrait, and the classic Counterfeit Detector Pen authenticates currency paper.

Dri Mark's Flash Test is smaller than a smartphone, faster than a scanner, over 99% accurate, and completely maintenance free. This extraordinary new technology is the first counterfeit detection device designed to sit next to the register and seamlessly integrate into your point-of-purchase protocol.

The Tri Test

3 Detections Tests on 1 Device

- Watermark Test
- UV Stripe Test
- Classic Detection Pen

The Flash Test

The tiny, low-profile design is barely noticeable to retail customers, and does not take up your valuable counter space. It runs on standard AC power, so there is no need to replace batteries. Use the lightening fast ink sensor to check for counterfeit in $\frac{1}{2}$ a second. UV and watermark tests are included in the unit for an extra layer of protection.

Smaller than a Smartphone

Scan to Get Started

BillScan5

Prevent loss with this fast and accurate counterfeit detector machine. Dri Mark's Scanner offers five different tests in one device that work together to verify genuine US currency. In less than one second Dri Mark's Scanner checks the bill's security strip, magnetic ink, infrared features, color, and size, producing consistently accurate results.

- 5 different tests in one device that work together to verify genuine US currency
- Scanner checks the bill's security strip, magnetic ink, infrared features, color, and size
- At 4.5 " W x 5.5" L x 3.5" the Scanner will fit just about anywhere
 - Runs on standard AC power OR 4 "AA" batteries
 - Can also be used as a bill counter
 - Can set scanner to exit bills to the front or back
