

FOREIGN CURRENCY:

The Tri-Test is excellent for testing the currencies of most countries.

EURO:

Small colorful fibers will glow under UV light and watermarks will appear in the blank spaces.

BRITISH POUND:

Small fibers will glow under UV light and watermarks will appear in blank areas.

CANADIAN DOLLAR:

Directly on the portrait of the Queen, the bill denomination will glow in multi-colors under UV light. Watermarks will appear in blank areas.

OTHER CURRENCIES:

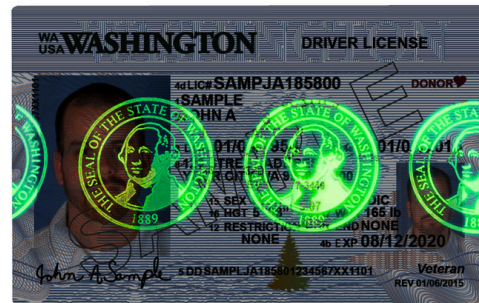

Check our website for more information.

IMPORTANT:

The included counterfeit detection pen is intended for US currency, and will not be effective on most foreign money.

DRIVERS LICENSES:

Most state issued US drivers licenses have invisible UV features which are easily authenticated by the Tri-Test. Slide your drivers license under the UV light on the left side of the Tri-Test platter. Frequently, there will UV markings on both sides. Use your license to familiarize yourself with a genuine state license.

PASSPORTS:

New US passports have a UV security strip down the inside of interior pages near the binding.

To authenticate older US passports, slide the inside of the back cover under UV light. You will see small glowing fibers in the paper. Many foreign passports and visas have UV features which you can check with your Tri-Test.

MANUFACTURERS LIMITED WARRANTY:

FOR A PERIOD OF 90 DAYS FROM PURCHASE, THIS PRODUCT WILL BE REPLACED, OR THE PURCHASE PRICE REFUNDED IF DEFECTIVE IN MANUFACTURE. EXCEPT FOR SUCH REPLACEMENT OR REFUND, THE SALE OF THIS PRODUCT IS WITHOUT OTHER EXPRESSED OR IMPLIED WARRANTY OR LIABILITY, INCLUDING, BUT NOT LIMITED TO, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR ANY KIND.

TRAVELERS CHECKS:

American Express Travelers Checks have both UV markings and a watermark portrait. Place the Check under the UV lamp to observe the bill denomination located over the portrait of the Roman Centurion. On the right side of the bill is a blank space. Activate the platter light to view a watermarked portrait of the Roman Centurion.

If you have doubts about a bill, you should use all three to help you make a determination. Use ONLY with Dri Mark authorized adapters – use of non-authorized adapters may cause the unit to malfunction and void warranty. Adapter included in model 351TV2. Adapter not included in model 351TRI – to find an authorized adapter visit www.drimark.com **Scan to Shop Now**

Instruction Booklet

IMPORTANT:

READ INSTRUCTIONS PRIOR TO USE

Visit our website
www.DriMark.com

THE TRI-TEST IS A PROFESSIONAL QUALITY HIGH TECH DEVICE FOR DETECTING COUNTERFEIT US CURRENCY, AND OTHER DOCUMENT FRAUD.

To achieve the best results, it is important to read these directions carefully prior to use, and keep them handy for reference. **Powering your Tri-Test™** Use 3 "C" type batteries (not included) to power the unit. Insert the batteries paying special attention to the orientation of the positive (+) and negative (-) terminals. Batteries should be replaced when the LED lights begin to weaken. An optional AC adapter (sold separately) can also be used to power the Tri-Test™. Simply insert the connector cord into the port located on the side of the unit and plug into a standard AC outlet.

Your Device is Equipped with an Automatic Sensor

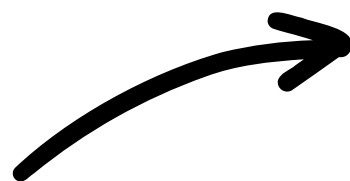

IMPORTANT OPERATING INSTRUCTIONS

Slide bill onto platter to activate UV/White Light

Toggle switch either way and slide bill onto platter to activate light tests

Lights are only activated by placing the bill onto the platter

Lights turn off when bill is removed

Scan to Learn More about the Automatic Sensor

UV (ULTRAVIOLET LIGHT) TEST FOR US CURRENCY:

IMPORTANT: This test is for US notes \$5 and higher printed 1996 and after, There are no UV markings on the \$1 bills or older currency!

Locate the toggle switch on the right side of the unit and press forward. Place the bill on the white platter, making sure the auto-sensor is covered. Placing the bill on the platter will automatically activate the UV light bar on top. With genuine US currency, you will notice the **security strip illuminated in the proper location and color**. The graphic strip located just below the platter on the front of your Tri- Test shows location and color for each denomination. If you cannot locate the stripe, or the stripe is the wrong color or location, the bill may be counterfeit.

IMPORTANT: Please note that on the \$100 bill, the pink stripe can be extremely faint, especially in bright ambient light. If you cannot locate the stripe, it is important to do the other 2 test.

CAUTION: DO NOT LOOK DIRECTLY INTO OR STARE AT THE UV LIGHTS. PROLONGED EXPOSURE CAN CAUSE EYE DAMAGE. KEEP THIS UNIT AWAY FROM CHILDREN.

2 WATERMARK PORTRAIT/STRIPE MICRO-PRINT TEST FOR US CURRENCY:

IMPORTANT: This test is for US notes \$5 and higher printed 1996 and after, There are no watermark portraits or security stripes on \$1 bills or older currency! After you've completed the UV Test described above, flip the toggle switch in the other direction, which will illuminate the platter area of the Tri-Test. On the right side of the bills, you will see a watermark portrait appear, which should mirror the portrait in the center of the bill. The only exception is the newest \$5 bill printed 2006 and later. On those bills, the watermark is a large number 5. Also note that printing will appear where the security stripe is located. The print is quite small, but clearly visible, and indicates the bill denomination. When you remove the bill, the light will automatically turn off.

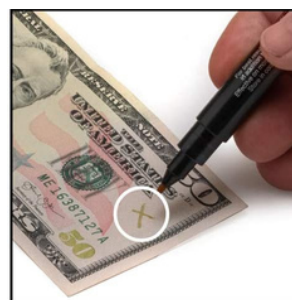

PAPER TEST FOR US CURRENCY:

IMPORTANT: US currency is printed on special paper. This is true of all US paper money printed 1959 and after, so this test works on all but the oldest bills.

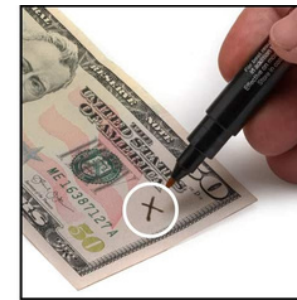

Remove the Counterfeit Detector Pen located in a slot on the right side of the Tri-Test. The pen contains a special fluid which authenticates US currency paper. Make a small mark on the face of the bill. If the mark is **light gold or yellow, the bill passes this test**. If the mark turns **dark brown or black, the bill could be counterfeit**. Be sure to re-cap and replace the pen after use. Leaving the cap off for more than a few moments can lead to false readings.

PEN REPLACEMENT: When your pen runs out of fluid use only the authentic original Dri Mark smart money counterfeit detector pen to replace. Available at most office supply stores. Beware of imitation products.

CAUTION: AVOID CONTACT OF PEN FLUID WITH SKIN, EYES, AND CLOTHING.

PASS
Light or yellow mark

FAIL
Dark Mark
